

The theory and practice of linking knowledge with action to address modern environmental challenges

ATMS/ESS/OCN 593

Winter 2017

Tuesday 3:30–4:20pm

Meeting modern environmental challenges requires new perspectives, approaches, collaborations, and knowledge—and new ways of linking scholarship with society.

This one-credit, reading and discussion-based seminar will explore the theory and practice of linking knowledge with action in support of progress on critical environmental challenges. Concepts will be illustrated using examples from efforts to inform societal responses to climate change.

This course is available for credit/no-credit only. Advanced undergraduates may register with permission of instructors. Postdoctoral researchers interested in auditing the course should contact instructors: Meade Krosby (mkrosby@uw.edu) and Amy Snover (aksnover@uw.edu).
